VAMSHI YADAV GOLLA

AI Agent Engineer | Automation Architect | ML Engineer

Vamshiyadav2783@gmail.com | +44 7887 132 409 | London, UK | https://www.linkedin.com/in/vamshi-yadav869/ | https://vamshi-27072001.github.io/portfolio/

PROFESSIONAL SUMMARY

AI Agent Engineer and Automation Architect with a proven track record of shipping production-grade autonomous systems for real UK businesses — Taco Bell UK, NSP Cases, and Lexnis Services. Specialise in LangChain and n8n agent design that cuts operational costs by 99.98% and eliminates 98% of manual effort. Currently completing MSc Computer Science at the University of East London. Available immediately for AI Engineer, Automation Engineer, and ML Engineer roles.

TECHNICAL SKILLS

AI Agents & LLMs: LangChain · n8n · GPT-4o / GPT-4.1-mini · Claude API · OpenAI Vision & Images API · Prompt Engineering · Tool-First Routing · MCP

Integrations & Backend: Telegram Bot API · LinkedIn REST API · Gmail OAuth2 · Google Sheets API · Supabase · PostgreSQL · REST APIs · Flask · Python

ML, Data & Cloud: Scikit-learn · XGBoost · Random Forest · TF-IDF · NLP · Pandas · NumPy · SQL · AWS · Google Cloud · Power BI · Docker · Git/GitHub

PROJECTS

NSP Cases – Autonomous AI Email Enquiry Handler *Apr 2026*

n8n (19 nodes) · GPT-4.1-mini · GPT-4o Vision · Gmail OAuth2 · Google Sheets · Supabase PostgreSQL | GitHub: https://github.com/Vamshi-27072001/NSP-email-enquiry.git

- Engineered a 19-node n8n pipeline replacing a human CS agent — reads Gmail enquiries, queries a 7-tab Google Sheets knowledge base, and sends HTML replies in under 60 seconds with zero manual intervention.
- Integrated GPT-4o Vision so customers can submit product drawings; agent analyses images and replies with precise specs, cutting B2B response time from hours to seconds and eliminating the #1 friction point in technical sales.

Taco Bell UK – Zero-Hallucination Restaurant AI Agent *Apr 2026*

n8n (11 nodes) · LangChain · GPT-4o-mini · Telegram Bot API · Google Sheets · Google Docs · PostgreSQL | GitHub: https://github.com/Vamshi-27072001/restaurant-ai-agent.git

- **99.98% cost reduction:** Operational spend cut from £12,000/yr to £36/yr; service upgraded from business-hours to 24/7 across 100+ menu items and 14 EU/UK allergens.
- Strict tool-first routing forces the AI to query live Google Sheets before every reply — making hallucination structurally impossible, with 100-message PostgreSQL memory for full session continuity.

ML-Based GPS Spoofing Detection for Autonomous Drones *Jun – Sep 2025*

Python · Random Forest · XGBoost · Scikit-learn · Feature Engineering · Pandas · NumPy |

- **99.95% accuracy:** Trained Random Forest & XGBoost on 62,000+ live telemetry records achieving a false-positive rate under 0.05% — exceeds aviation safety thresholds and is commercially deployable.
- Engineered predictive features from raw sensor telemetry (GPS HDOP, yaw rate, throttle %, roll) through correlation analysis and feature-importance ranking, turning complex sensor data into a robust, defensible threat detection model.

EXPERIENCE

Cyber Security Intern | Lexnis Services Limited — Hertfordshire, UK *Nov 2025 – Present*

- Benchmarked 10 UK vehicle tracking providers across 5 criteria; identified a security market gap supporting a £9,100/month operational model — insights informed 3 major business decisions.
- Produced AI-assisted executive-level market intelligence reports mapping 15+ product features per provider for senior leadership.

EDUCATION

MSc in Computer Science *Oct 2024 – May 2026*

University of East London, UK | Software Engineering · Big Data Analytics · AI & Computer Vision · Cloud Computing
